ACCURATE. HONEST. IMPARTIAL.

Description

Equipment used for ultrasound imaging of internal body structure. Primarily used in general imaging, including diagnostic radiology, women's health, OB, urology, and other related specialties.

COMING SOON

Our goal is to improve healthcare by helping providers make informed decisions. As such, KLAS will be measuring the medical imaging equipment segments differently. We are asking more targeted questions and focusing on deeper discussions with providers so the industry can see which vendors are adding value and aligning themselves to help provider organizations be more successful. KLAS scores will indicate vendor partnership, support, and development of product suites. We will continue to provide product specific details by: 1) having definitive dialogue around product specific strengths/weaknesses and reflecting them in the comments section of KLAS, 2) publishing focused specialty reports to help providers be informed on product specifics in market segments.

We believe this approach will arm providers with the best information possible as they make decisions in the new world of healthcare.
